Bengaluru, India

I am a Computer Science student passionate about leveraging technology to solve real-world problems, proficient in multiple programming languages. Eager to contribute to innovative projects and drive impactful solutions in the tech industry.

Education

- **PES University** **2022 - 2026[Expected]**
Bachelor of Technology, Computer Science and Engineering Bengaluru, India
- **The Samhita Academy** **2011 - 2022**
CBSE 1st Grade - 12th Grade [Physics, Chemistry, Mathematics and Computer Science] Bengaluru, India

Experience

- **Codincity Digital Technologies** **July 2024 - September 2024**
Summer Intern - **React, Node.js, Express, MongoDB Atlas and Tailwind CSS.** Bengaluru, India
Developed a project management tool using modern web technologies and following industry best practices. Modeled after Jira and Trello, the tool featured task management, user authentication, real-time updates, and automated notifications. This experience sharpened my skills in full-stack development, API integration, and UI design.
- **Destination Designs Private Limited** **September 2023 - January 2024**
Project Intern - **Next.js, React, MongoDB, Node.js, AWS** Bengaluru, India
www.destinationdesigns.net.in
Led development of the architectural firm's first-ever web presence, establishing their digital footprint and generating new client leads.
 - Engineered a proprietary image optimization system that achieved 40% faster page load times while minimizing AWS hosting costs.
 - Implemented Next.js serverless functions to replace traditional Express endpoints, resulting in 60% faster API response times and improved application scalability.
- **PESU I/O** **August 2023 - Present**
Deputy Manager Bengaluru, India
PESU I/O is PES University's innovative, revenue-generating peer-to-peer learning platform. I collaborate with Subject Matter Experts (SMEs) to create industry-relevant technical courses. My role includes facilitating interactive forums, coordinating project collaborations, and help develop strategies to enhance platform growth and sustainability.

Technical Skills

Languages: Python, C, C++, Go, JavaScript, SQL

Technologies: Git, MERN Stack, Next.js, AWS, Tailwind CSS, Postman API, OpenCV, Graph Algorithms

Cloud Computing: Docker, Kubernetes, Microservices, REST APIs, Virtualization, Cloud Security

Computer Networks: TCP/IP, OSI Model, HTTP/HTTPS, DNS, Routing Protocols, ARP, ICMP

Operating Systems: Process Scheduling, IPC, Thread Synchronization, Memory Management, File Systems

Object-Oriented Design: UML Diagrams, Design Patterns, SOLID principles, OOP (Java/C++)

Software Engineering: Agile (SCRUM), DevOps, CI/CD, Software Testing (JUnit, Selenium)

Machine Learning: Decision Trees, Random Forest, SVM, KNN, CNN, RNN, Transformers

Database Management: SQL, MongoDB, Neo4j

Projects

- **SocialSense: A Neuro-Symbolic AI Model for Contextual Social Reasoning and Guidance:** SocialSense is a platform that combines neural networks and symbolic reasoning to deliver context-aware, explainable advice for socially anxious individuals. Leverages the Social Chemistry 101 dataset to model moral foundations, cultural norms, and situational dynamics. Integrates transformer-based NLP models for contextual understanding with a rule-based symbolic engine for moral inference and adaptive revision.
- **Huffman Coding Visualizer:** Implements Huffman Coding for lossless data compression in **C**, with a visual representation of the Huffman Tree using **Raylib**. It demonstrates encoding processes through clear visual feedback, enhancing understanding of algorithmic efficiency.
- **Target:** A **computer vision** project that implements a face tracking and locking system using **OpenCV** for face detection and an **Arduino** for controlling servo motors. The system consists of three main components: Arduino code for servo control, a **Python** script for face tracking, and a manual control interface using **Tkinter**.
- **ShopSmart:** A shopping list application implemented using a **Go Microservice**. The project demonstrates various aspects of Go programming, including its concurrency model, standard libraries, and best practices.
